Projects

Flight Booking System:

- System that allows companies to securely store user login credentials, manage user itineraries, and manage flight booking data.
- Offers encryption and decryption of user data, while also offering smooth user itinerary management.
- Allows companies to store, filter or update flight booking data conveniently.

Book & Movie Collectors Website

- User-friendly website allowing collectors to catalog their book and movie collections, including features for tracking owned items and identifying missing collection pieces.
- Enhanced item listings with options to mark books and movies as available for sale or trade, facilitating user interaction and exchange within the community.
- Created social networking features enabling users to share reviews, ratings, and recent reads/views on their profiles, similar to platforms like MyAnimeList.
